

Liquid Glomax/M8060

Description:	Red coloured liquid
Abrasive type:	A single calcined alumina
Binder type:	3 component binder
Application:	Medium cut and colour grade
Metal type:	Ferrous and non ferrous metals
Buff type:	Ventilated treated cotton Sisal cotton blend/bias sisal ventilated buffs Sisal cord
Performance:	Cut: 7 Colour: 6

Comment:

- General purpose cut and colour compound. Can be used as a single liquid or as part of a two/three stage process followed by M7812 (Glowwhite) and then MFFL2 for an exceptional result.
- Excellent on ferrous metals, particularly cookware and cutlery, good for pinch roll applications.
- The binder system makes the liquid medium greasy. Therefore good for contoured components and harder buffs. Nothing softer than a No 1 cloth will work (too greasy). The binder contains pitch and although greasy in use should clean easily in most cleaning systems.
- On aluminium M8095 gives a better result as it is cleaner, but M8060 may be needed for very contoured/high rake aluminium components.
